Virtual DJ Skin - Pioneer CDJ2000.rar! Q: QPainter:scale issue when combining QRect and QPalette I am creating a custom widget, with the ability to change the color of the text in the widget. To do so, I tried to overlay a QPainter on the widget (this is where I create the QPalette to change the color), then paint on the widget with the QPainter. This is the main widget class (mText is my custom widget, and the m\_textPainter is my custom QPainter); mText->setPalette(m\_textPainter->palette()); mText->setText("..."); mText->setColor(QColor(m\_textPainter->palette().color().dark()); mText->setFont(m\_textPainter->font()); mText->setAlignment(Qt::AlignLeft | Qt::AlignVCenter); mText->setScaledContents(true); This is my custom paint method (m\_textPainter is my custom QPainter); void mText::paintEvent(QPaintEvent \*event) { QPainter painter(this); QPainter painter\_2(&m\_textPainter); QRect textRect = m\_textPainter->textRect(); QColor textColor = m\_textPainter->palette().color(); painter\_2->setPen(textColor); painter\_2->setBrush(textColor); // draw font painter\_2->drawText(textRect, textColor); // draw background painter\_2->setBrush(QBrush(textColor)); painter\_2->drawRect(textRect); } The issue I am having is that the first line of code seems to be scaling my widgets to the size of the text I am trying to put on it, so I can't change the color of the text until I use a standard QPainter. The second line works just fine, but I don't want to use a QPainter. In my main window class, I have a color picker (QPal

The first occurrence is in the following line: Slist[\$i] = \$img[\$i] = \$img2[\$i] = \$img3[\$i] = \$img4[\$i]; When you press enter to insert the new line, it creates an array for \$img that exceeds the limits of your array. You should change it to: Slist[] = \$img[] = \$img2[] = \$img3[] = \$img4[] = 'url'; More information on Entering Strings in PHP Q: VS.NET 2008 add-in: how to add new item "TextBox" for a text editor I want to add a new text-editor to VS.NET 2008. I found an example for this, but when I add the new item and configure it, it looks like the Add-In Creator does not add all the properties I need, so I cannot configure the new item like the TextView, for example. I think I have to edit the.vsdX file directly to change the default values, but I don't know how to do that. Anyone can help me please? A: To add a new class as a text editor you'll need to add a new project item template and then create a new class that is a custom text editor with the properties you 2d92ce491b
