Category:Board game gameplay and rules Category:Puzzle video games Category:Video game franchises introduced in 1935Distribution of the human immunodeficiency virus type 1 trans-activating proteins Tat and Rev is altered in human immunodeficiency virus type 1 (HIV-1)-positive patients with acquired immunodeficiency syndrome. Proteins Tat and Rev from the trans-activating regulatory region of human immunodeficiency virus type 1 (HIV-1) are important for viral replication and pathogenesis in the acquired immunodeficiency syndrome (AIDS) by modulating viral gene expression. Proteins Tat and Rev are expressed in multiple tissues and at different concentrations throughout the body. The concentration of these proteins in AIDS patients with HIV-1 infection has not been investigated previously. We found that there was a decrease in the Tat concentration in the serum of patients with AIDS. By contrast, the distribution of the Rev protein was altered in AIDS patients. Serum Rev protein concentrations were increased in AIDS patients, especially those with other associated opportunistic infections, suggesting a possible role for Rev in modulating host immune responses./* * Copyright 2019 the original author or authors. * * Licensed under the Apache License, Version 2.0 (the "License"); * you may not use this file except in compliance with the License. * You may obtain a copy of the License at * * * * Unless required by applicable law or agreed to in writing, software * distributed under the License is distributed on an "AS IS" BASIS, * WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. * See the License for the specific language governing permissions and * limitations under the License. */ package org.gradle.api.plugins.servlet.internal.dependency import org.gradle.api.file.FileCollection import org.gradle.api.file.FileResolver import org.gradle.api.internal.artifacts.ivyservice.resolveengine.ModuleVersionSelector import org.gradle.api.internal.artifacts.ivyservice.resolveengine.resolveengine.MavenArtifactResolveEngine import org.gradle.api.internal.artifacts.ivyservice
