AutoCAD is used for architectural, engineering, and other types of civil engineering projects. It also has a manufacturing-oriented version called AutoCAD Mechanical (AEM), which is used for engineering and manufacturing projects involving mechanical parts and assemblies. AutoCAD LT is a cheaper version of AutoCAD designed for home use. AutoCAD WS, a Web and mobile version, is used by students, freelancers, and consultants, and includes features that make it suitable for mobile use. How AutoCAD Works AutoCAD is a commercial-grade, feature-rich, and user-friendly CAD application. Unlike many of the CAD tools available on the market, AutoCAD was designed for both beginners and expert users. New users can get started by creating simple 2D drawings. To work with a complex drawing project, a cadastral engineer can use the drawing-plane function to view, pan, and zoom across large 3D drawings. AutoCAD drawings are created and stored in the drawing data (.dwg) format. For maximum efficiency, a cadastral engineer should create the drawing on an external storage device, such as a portable external hard drive or a USB flash drive, and load it into the computer for editing. The drawings can be edited in the "native" DWG format, which is a file format native to AutoCAD, or they can be converted to the native GDL format, a DWG version that is compatible with native CAD software, including Autodesk Inventor. The drawing-plane function displays the screen at different levels to help cadastral engineers work with large drawings. You can view a drawing in a different drawing-plane level by using a keyboard shortcut, selecting the view icon on the status bar, and selecting a plane. You can change the drawing-plane level by using the view icons on the status bar. To make it easier for cadastral engineers to adjust the size of a drawing window, the AutoCAD application includes zoom-in and zoom-out functions. You can zoom in and out of a drawing by using a mouse scroll wheel or your keyboard's zoom key. The drawing canvas is scaled differently than the drawing's size. You can zoom the drawing to show an entire neighborhood of blocks or view a large viewport that shows many blocks in the drawing. You can also zoom in on the drawing by placing the drawing window over a specific object. AutoCAD

The second generation of Autodesk product, AutoCAD Crack Keygen LT (later released as Architectural Desktop) is a cheap, small, fast and simple application suitable for desktop drawing use. AutoCAD LT runs on the Windows platform and is free to the public (although some extended features must be paid for). However, from May 2015, Autodesk has discontinued support for AutoCAD LT, and there are no active plans to port it to other platforms. Field of the Invention The present invention relates to a method of fabricating an optical device, an optical device, and an image display device. 2. Related Art An example of an optical device is a polymer dispersed liquid crystal (PDLC) optical device. The PDLC optical device includes a PDLC film, a light transmitting film, and a transparent substrate. The PDLC film is obtained by dispersing a liquid crystal material in a polymer material, and has an electro-optic property due to change of alignment direction of the liquid crystal material. The light transmitting film transmits light having a specific wavelength from light entering from outside of the PDLC optical device to the PDLC film, and the transparent substrate transmits light having the specific wavelength from the light transmitting film to the PDLC film. In the PDLC

optical device, the light transmitting film, the transparent substrate, and the PDLC film are overlapped, and the alignment direction of the liquid crystal material in the PDLC film is controlled by application of a voltage, and thereby the optical device is controlled. The transparent substrate of the PDLC optical device is formed of a transparent plastic, for example, polycarbonate or polymethyl methacrylate (PMMA). In this case, the PDLC film is interposed between the transparent substrate and the light transmitting film a1d647c40b
