Additional use of Photoshop as a graphics program is limited to the Adobe Photoshop Elements package, the name for the free, less sophisticated application that works with PDF files. In this article, we will discuss the following: What is a pixel? How do pixels get on your computer screen? How can you see them? How can you edit them? How can you save them? What is a pixel? Before we go into detail about how Photoshop uses pixels, we need to know what is a pixel. A pixel is a tiny square, 1/300th of an inch in size, that is the smallest unit of the digital realm. Once a pixel is created, it cannot be enlarged or reduced. By contrast, a raster image (basically, a picture like this one) can be enlarged and reduced and can be printed as large as desired. For example, here are two screenshots of the same house, taken a year apart. The second screenshot is printed on a sheet of paper and enlarged to show the differences. Because Photoshop takes raster images as the source, it has no problem with, for example, enlarging parts of the image (like I did here), and, therefore, the "reduction" does not show. In the above example, the building and the roof were built for a different size, so the roof area got smaller. Once a pixel is created, it cannot be enlarged or reduced. How can you see them? Most computer screens have a pixel-based resolution -- for example, 1024 x 768. The pixel may not be square, but it is an exact square on the screen. Pixels cannot be seen at a distance with the human eye, but on a computer screen, they can be seen. On a computer screen, a pixel is always represented by a dot. However, if you enlarge or print an image, you will see individual dots that look like the background house in the photo above. How can you edit them? If you want to use Photoshop to do any kind of image editing on the fly, you need to know how Photoshop divides objects into a pixel-based image. Photoshop uses RGB color data as pixels -- Red, Green, and Blue. In the image below, the Bigger circle is red, the smaller circle is blue and the middle circle is green. What's that? If you
